**EAGLE PLAINS
RESOURCES**

KETCH PROJECT

January 2025

BossTrend

- inferred Boss diorite related breccia trends onto Ketch claims
- rock (grab): 0.272% Cu (Thor5)
- rock (grab): 0.975% Cu (Zig)

Thalia Occurrence

15.0m trench @ 0.38% Cu,
not analysed for Au (AR 07165)

Geophysical Anomalies:

- coincident mag/chargeability/conductivity highs
- trends NW onto property
- correlates with known porphyry mineralization

**KODIAK COPPER
(Aspen Grove)**

DDH K-15-10

- 108.0m @ 0.28% Cu, 0.04 g/t Au
- 26.0m @ 1.05% Cu, 0.05% Au
- AR 36184

DDH K-15-01

- 265.5m @ 0.27% Cu, 0.11 g/t Au
- incl. 78.0m @ 0.50% Cu, 0.15 g/t Au
- AR 36184

KETCH PROJECT - 1126 ha.

Limited drilling on Eagle Plains tenure:

- majority 70's era percussion drilling ranged from 30-110m
- unlikely these would have reached projected plunge of mineralized zone

**KODIAK COPPER
(MPD)**

Gate Zone

- Discovered in 2019
- Best intercept:
- 535m of 0.49% Cu,
0.29 g/t Au

Ketchan Prospect

- calc-alkaline porphyry geology
- min. occurs at margins of mag and chargeability highs
- favourable porphyry alteration (potassic and calc-potassic)
- strikes NW, open along trend
- apparent plunge to NW
- PGE potential may be significant with grab samples up to 0.57 g/t Pd, 0.30 g/t Pt (AR 36184).
